

Relentless Readiness For Cybersecurity

Stop Spending on What's Not Working.

Despite spending millions on cybersecurity technology and training, IT security practitioners unfortunately do not understand their organizations' preparedness until breaches occur. Accordingly, a recent industry survey showed that 53% of cyber attacks are still being missed. Most organizations use compliance checklists to guide their cyber investment decisions. But that approach misses one crucial detail:

Compliance doesn't equal readiness.

Continuous Readiness. Complete Clarity.

New threats demand a new strategy. Unlike typical risk management solutions that estimate readiness using industry benchmarks for patching and compliance, SightGain tests and measures readiness using real-world attack simulations in your live environment.

SightGain's Continuous Readiness Platform introduces a new paradigm for security leaders: the ability to measure the actual defensive posture of your security resources.

Continuous Readiness:

- ✔ **Test and measure** organizational response against known threats.
- ✔ **Fine-tune** your people, processes and technology to stop actual exploits.
- ✔ **Invest (or disinvest)** based on empiric evidence.

Real-time Tests and **Real-world Scenarios.**

SightGain safely runs attack scenarios on your production system to empirically answer the questions that keep you up at night.

Balanced cyber portfolio?
Configured correctly?
Redundancies?
Where are weaknesses?

Right talent?
Spot threats?
Reaction Tme?
Adhere to procedures?

Financial exposure?
Data exposure?
Downtime potential?

Invest in what works. Retire what doesn't.

Our cutting-edge readiness solution eliminates assumptions and helps you make cybersecurity decisions based on data.

- ✔ **Quantify** the likelihood and financial impact of a breach.
- ✔ **Map your performance** to common frameworks like MITRE ATT&CK, NIST, and CMMC.
- ✔ **Find gaps and redundancies** in your processes and technology stack.
- ✔ **Measure the performance** of your team against real threats. Prioritize the best investments to decrease your risk level with empiric evidence.
- ✔ **Monitor readiness** over time to close gaps and reduce exposure.

SightGain's customers aren't only better protected—they save money in the process. Boost topline savings by **more than 15%** by retiring low-performance gear.

Changing the cybersecurity conversation.

Our team has been improving cybersecurity operations for over 20 years. We understand that an effective cyber strategy requires the right combination of people, processes, and technology. That's why we built SightGain: to change the conversation from hypothetical vulnerabilities to continuous readiness, and from compliance to ROI.

We're proud to work with some of the **highest** security organizations in the world.
