

New Cyber Attacks Are Coming. Is Your Team Ready?

Train Where You Fight.

Most cybersecurity teams rely on classrooms and virtual labs to train their SOC analysts. Until now, they've been your only option for staff development. But they simply don't prepare your team for real-world scenarios.

Despite spending nearly \$170 billion on cybersecurity in 2020, organizations still miss 53% of all attacks. Technology is part of the solution—but it means nothing if your team can't use it to defend against exploits.

Practice against **real malicious attacks** in production.

SightGain is the world's first live-fire cybersecurity training platform. It safely executes malicious scenarios on your production system, so you know exactly how your team will perform at game time.

Ditch the lab. Test the real thing.

- ✔ Use actual adversary tactics to test and improve your team's response.
- ✔ Find pockets of performance and non-performance.
- ✔ Compare the readiness of your people and your technology.
- ✔ Leverage in-depth scenarios and dynamic recommendations for rapid improvement.

Individualized training to sharpen skills.

Assign tailored online exercises based on each analyst's live-fire test results. SightGain's interactive training modules provide scenario-based instructions and then rate competency. Now you can methodically identify and address the skill gaps that directly impact your organization's readiness.

Automated Attacks, Customized for Your Team.

Conduct scheduled or unannounced attack scenarios to evaluate analysts on the job. Automate random tests to keep them on their toes, or schedule regular drills for the whole team—fully integrated into your existing security and response systems.

Live Fire

Safely run test attacks on your production system.

Scenario Manager

Pick the attack you want to run, and assign it to one analyst or the whole team.

Guided Training

Assign online training to address deficiencies and strengthen skills based on actual performance.

Readiness Dashboard

Explore individual and organizational results.

Changing the cybersecurity conversation.

Our team has been improving cybersecurity operations for over 20 years. We understand that an effective cyber strategy requires the right combination of people, processes, and technology. That's why we built the SightGain Cybersecurity Readiness Platform: to change the conversation from hypothetical scenarios to continuous readiness, and from compliance to ROI.

We're proud to work with some of the **highest security organizations in the world.**
