

SIGHTGAIN CONTINUOUS READINESS PLATFORM

Hard Data for Cybersecurity Decision Making

Get more out of your BAS tool

A Breach and Attack Simulation (BAS) tool gives you a wealth of performance data on your ability to stop attacks. But how can you make the most of that data?

SightGain transforms your BAS telemetry into actionable business intelligence. Our Readiness Platform gives you hard data to assess whether your people, processes, and technology are prepared for the modern threat landscape.

Data-driven insights for your risk management

Security is only effective if you know what's working, and what's not. BAS tools provide great data, but not the analysis needed to optimize your SOC. With limited time and budget, it's critical to focus your efforts on gaps in your technology and analyst training.

SightGain works with your BAS to deliver actionable intelligence, including:

- 1 How well your analysts and teams respond to relevant threats on production equipment
- 2 What capability gaps exist between your SOC and the current threat landscape
- 3 Empirical performance data that informs the overall level of business risk
- 4 Cybersecurity technology and personnel ROI, based on actual performance and costs

Assess whether your people, processes, and technology are prepared for the modern threat landscape.

Understand the Truth About Your Cybersecurity Readiness

SightGain and your BAS together take you beyond technical testing to continuous analytics about your readiness to confront attacks.

Measure
the state of your
security ecosystem

Quantify
the ROI of security
investments

Identify
your security strengths and
weaknesses in production

Get smarter about your security investments with SightGain

Optimize your security investments with objective, empirical answers to the questions that the cybersecurity industry has been guessing at for years.

- 1 SightGain's cybersecurity training platform measures your analysts' live-fire performance and recommends interactive training modules based on their test results. You can find skill gaps and deploy individualized training.
- 2 SightGain brings together cost data and performance data, giving you an unprecedented ability to evaluate return on investment for both technology and personnel, and prove strong and weak areas in the technology stack.
- 3 SightGain shows you where you can save money while increasing cybersecurity performance. We shift the focus from patches and alerts to performance against real threats.

SightGain's continuous readiness solution is designed to find gaps and redundancies in the performance of people, processes, and technology in cybersecurity systems. It uses live-fire attack simulations to measure, quantify, and optimize cyber defense readiness. By adding SightGain to their BAS platform, organizations can ensure that their SOC analysts and tools are ready, before being under attack.
